## Installation Instructions

### Model M5300

- 1) Disassemble front frame from the back frame.
- 2) Mount back plate to the wall using the screw holes closest to the roll framed edge.
- 3) Remove the protective pvc plastic from the mirror. Position mirror on the bottom edge of the the back plate with mirror resting on the roll formed flange and hold in place. Make sure the mirror is firmly in the frame. Do not remove the Styrofoam backing as that keeps the mirror in place.
- 4) Starting at the bottom of the frame place the front frame over the edge of the back plate. Start to snap the frame onto the edge of the back plate working toward the corners. Then continue up the edge across the top until frame snaps in place.
- 5) Replacement stainless mirrors are available without the frame.
