Cleaning Instructions

1. The best and safest cleaner for a mirror is clean, warm water used with a soft, lint-free cloth or micro fiber cloth. Be careful not to allow the edges of the mirror to become or remain wet over a period of time.
2. Never spray any cleaner directly onto a mirror. Instead apply the cleaner to a soft micro fiber cloth and then wipe the mirror. This will also prevent “puddling” at the mirror edge where the cleaner could attack the backing.
3. If that does not work, use a commercial cleaner that does not contain ammonia, vinegar, acid or alkali cleaner. All of these can attack the front surface edges and backing of the mirror resulting in black edge.
4. Do not use acid or alkali cleaners for mirror cleanup after installation. They can attack both the surface and edges as well as the backing of the mirror. And *never* use an abrasive cleaner on any mirror surface.
5. Always use soft, grit-free cloths when cleaning a mirror to reduce chances of scratching the surface. Ideally a micro fiber cloth.
6. Be sure to dry all joints and edges thoroughly to be certain that no commercial cleaner comes in contact with the edge and backing.
